Summary

AI & Machine Learning engineer with end-to-end experience building and deploying ML, Deep Learning, and Generative AI systems. Delivered 10+ production-ready projects across Speech Emotion Recognition, Computer Vision, and LLM-powered chatbots. Proficient in CNNs, LSTMs, LangChain, Agentic AI, and RAG pipelines. Key impact: **15–25%** model accuracy gains, sub-second inference latency, and **60%+** reduction in manual workflows.

Technical Skills

ML & Deep Learning: Supervised/Unsupervised Learning, CNNs, LSTMs, Transfer Learning, Feature Engineering, Hyperparameter Tuning, ROC-AUC, Precision-Recall, Confusion Matrix

Generative AI & LLMs: LangChain, Prompt Engineering, Agentic AI (Reasoning, Tool Use, Memory), RAG Pipelines, Vector Databases

Frameworks & Libraries: TensorFlow, PyTorch, Scikit-learn, OpenCV, Librosa, Flask, Streamlit, Pandas, NumPy

Programming & Tools: Python, SQL, C/C++, Git, GitHub, Jupyter, Google Colab, TensorBoard, Grad-CAM, n8n

Experience

AI & Machine Learning Trainee

May 2025 – Present

CampusX — 100 Days of ML Bootcamp

- Completed 30+ hands-on ML modules; built 5+ production-quality models with Scikit-learn using cross-validation and hyperparameter tuning, improving baseline accuracy by **15–25%**.
- Processed 10,000+ record datasets with Pandas/NumPy pipelines; evaluated models via ROC-AUC, precision-recall curves, and confusion matrices.

Deep Learning Trainee

June 2025 – Present

CampusX — Deep Learning Specialization

- Built CNNs, MLPs, and transfer learning architectures in TensorFlow and PyTorch; applied dropout, batch normalisation, and data augmentation to reduce overfitting.
- Delivered Digit Recognition, Dog vs. Cat Classifier, and Face Emotion Detection models; used TensorBoard and Grad-CAM for explainability and debugging.

AI Project Developer — Agentic AI & LangChain

Ongoing

Personal GitHub Portfolio

- Designed autonomous agents for multi-step reasoning, planning, and tool execution; built RAG-based Q&A systems integrating vector databases with LLM inference.
- Integrated external APIs with persistent memory for contextual decision-making; extended automation pipelines with n8n to eliminate repetitive manual tasks.

Key Projects

Speech Emotion Recognition (SER) — CNN-LSTM Hybrid

Deep Learning · Flask

- Classified 6+ emotions from 2,000+ audio samples (RAVDESS & CREMA-D); extracted MFCC, chroma, and Mel-spectrogram features, boosting performance by **~18%**; achieved **85%+** validation accuracy.
- Deployed real-time inference via Flask REST API with **sub-second latency**.

LLM-Powered Customer Service Chatbot

Generative AI · LangChain

- Automated 15+ customer intents with multi-turn contextual memory; reduced manual handling by **~60%** and improved response relevance by **~35%** via structured prompt optimisation.

Real-Time Traffic Monitoring System

Computer Vision · OpenCV

- Vehicle detection & counting at **20+ FPS** with **90%+** accuracy; applicable to smart-city congestion monitoring and adaptive signal control.

Education

B.S. Computer Science (BSCS) — In Progress

2026 – 2028

Minhaj University Lahore

Associate Degree Program (ADP) in Artificial Intelligence

Apr 2024 – Apr 2026

Minhaj University Lahore

CGPA: 3.7 / 4.0

Intermediate (ICS) — Mathematics, Physics & Computer Science

2021 – 2023

Punjab College, Lahore

Grade: A

Matriculation (SSC) — Science Group

2019 – 2021

Unique Science Institution, Lahore

Outstanding Academic Performance
